Résumé - Che Chen

(347) 465-7864 | cctom@umich.edu | Github: TomCC7

Seeking internship for Summer 2024. Strong interest on Robotics R&D and related software engineering.

Education

(Incoming) University of Michigan *Sep. 2023 - May 2025 (expected)*
M.S. in Robotics, GPA: N/A

University of Michigan *Sep. 2021 - May 2023*
B.S.E in Computer Engineering, GPA: 3.94/4.00

Experiences

Research Assistant, ROAHM LAB *May 2022 - Present*
- Performed **System Identification** on Kinova Gen3 to measure the joint friction, damping, and transmission inertia
- Developed a robot control framework that provides both realtime performance and high-level abstraction
- Implemented a **robust controller** based on interval arithmetic and verified the tracking performance
- Developed **Pytorch** algorithms to rapidly calculate edges of 2D zonotopes

Intern Robotics Engineer, Petoi LLC *May 2022 - Aug. 2022*
- Developed a ROS Interface to control robot powered by OpenCat
- Applied a **human pose detection** model to map human postures to robot cat [demo available]

Lead Software Developer *Feb. 2022 - Apr. 2023*
MultiDisciplinary Project (MDP) guided by Prof. Paul Green
- Led software development of the backend team
- Developed Joystick Interface on Linux for Carla Simulator
- Developed Wizard progam to provide low-cost self-driving car simulation

Course Projects

Vox-Fusion-Robust [code] [dataset] *Mar. 2023 - Apr. 2023*
Mobile Robotics by Prof. Maani Ghaffari
- Led a team of 5 students to complete a **NeRF-based SLAM** project
- Enhance an SOTA NeRF-based SLAM project to be robust to global illumination change
- Created datasets to evaluate SLAM algorithm robustness to global and local illumination changes

A Guided Tour to Neural Radiance Field (NeRF) [code] *Apr. 2022*
Deep Learning for Computer Vision by Prof. Justin Johnson
- Re-implemented a tiny NeRF network and learned key ideas on NeRF such as
- Learned how to setup a PyTorch machine learning training from scratch Volume Rendering methods

Table Tennis Ball Collector for Use in Multi-ball Training [code] *Feb. 2022 - Apr. 2022*
Introduction to Embedded System Design by Prof. Robert Dick
- Implemented a **CV algorithm** to estimate the 3D position of ping pong balls using a single RGB camera
- Designed a simple but efficient ping pong ball collecter using **3D printing** and rubber bands

Robot Localization in PyBullet [code] *Dec. 2021*
Introduction to Algorithmic Robotics by Prof. Dmitry Berenson
- Implemented a **path planning** algorithm using A* in Pybullet simulation
- Implemented a **Kalman Filter** and **Particle Filter**, and analyzed their performance in terms of accuracy

Skills

Programming Language C++, Python, MATLAB, Julia, HTML/CSS, Bash, LaTeX
Software ROS (1&2), Docker, Git, Emacs, Linux, Pytorch, Carla, Fusion360
Knowledge Robot Kinematics & Dynamics, Control System, SLAM, Computer Vision, Embedded System, Machine Learning, Computer Network, Multithreaded Programming
