Résumé - Che Chen

(347) 465-7864 | cctom@umich.edu | Github: TomCC7

Seeking internship for Summer 2024. Strong interest on Robotics R&D and related software engineering.

Education

(Incoming) University of Michigan *Sep. 2023 - May 2025 (expected)*
M.S. in Robotics, GPA: N/A
University of Michigan *Sep. 2021 - May 2023*
B.S.E in Computer Engineering, GPA: 3.94/4.00
Selected Courseworks: Data Structure and Algorithms, Computer Networks, Mobile Robotics, Control Systems

Experiences

Research Assistant, ROAHM LAB [paper] *May 2022 - May 2023*
- Conducted System Identification on Kinova Gen3 and ensured that all parameters fell within a 5% tolerance bound.
- Created a real-time robot control framework for easy integration, utilized in 2 projects.
- Implemented a **robust controller** using interval arithmetic, ensuring tracking error below 0.0049 rad.
- Devised **Pytorch** algorithms to rapidly calculate edges of 2D zonotopes

Intern Robotics Engineer, Petoi LLC *May 2022 - Aug. 2022*
- Developed a ROS Interface to connect OpenCat into ROS community
- Applied a **human pose detection** model to map human postures to robot cat [demo available]

Lead Software Developer, MultiDisciplinary Project (MDP) *Feb. 2022 - Apr. 2023*
- Led a group of ~10 students in software development
- Developed Joystick Interface on Linux for Carla Simulator
- Refactored and enhanced Wizard project to provide low-cost (~200$) self-driving car simulation

Course Projects

Vox-Fusion-Robust [code] [dataset] *Mar. 2023 - Apr. 2023*
Mobile Robotics by Prof. Maani Ghaffari
- Led a team of 5 students to complete a **NeRF-based SLAM** project
- Enhance a SOTA NeRF-based SLAM project to be robust to global illumination change
- Created datasets of more than 10 scenes to evaluate SLAM algorithm robustness to global and local illumination changes

A Guided Tour to Neural Radiance Field (NeRF) [code] *Apr. 2022*
Deep Learning for Computer Vision by Prof. Justin Johnson
- Re-implemented a tiny NeRF network and learned key ideas on NeRF such as Volume Rendering methods
- Familiarized with how to setup a PyTorch machine learning training from scratch

Table Tennis Ball Collector for Use in Multi-ball Training [code] *Feb. 2022 - Apr. 2022*
Introduction to Embedded System Design by Prof. Robert Dick
- Designed a computer vision algorithm utilizing a single RGB camera to accurately estimate the 3D position of ping pong balls.
- Manufactured a simple but efficient ping pong ball collection device with **3D printing** and rubber bands

Robot Localization in PyBullet [code] *Dec. 2021*
Introduction to Algorithmic Robotics by Prof. Dmitry Berenson
- Implemented the A* path planning algorithm within a PyBullet simulation.
- Implemented and compared the performance of **Kalman Filter** and **Particle Filter**

Skills

Programming Language C++, Python, MATLAB, Julia, HTML/CSS, Bash, LaTeX
Software ROS (1&2), Docker, Git, Emacs, Linux, Pytorch, Carla, Fusion360
Knowledge Robot Kinematics & Dynamics, Control System, SLAM, Computer Vision, Embedded System, Machine Learning, Computer Network, Multithreaded Programming
